Total worldwide installations to date: more than 5,000

Failures to date: ZERO

SWELLFIX engineers risk, cost and complexity *out* of the traditional well construction and production process.

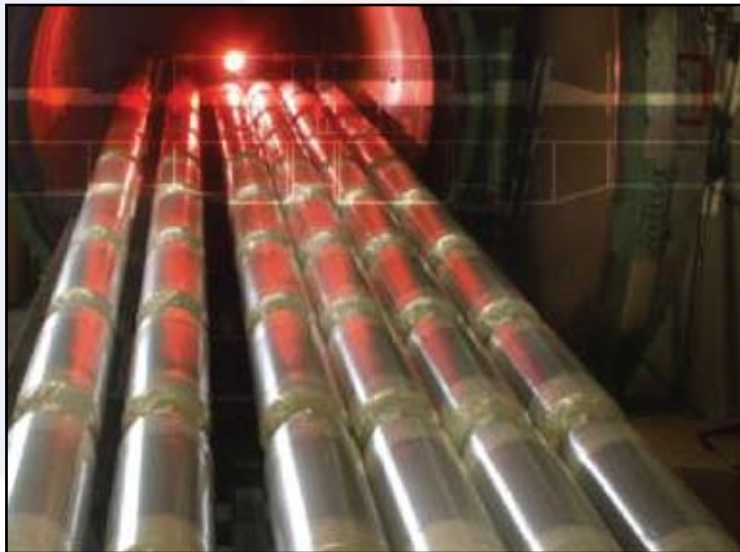

About **SWELLFIX**

SWELLFIX is a global leader in swellable elastomers—a dynamic, yet **simple** solution for zonal isolation and inflow control in horizontal and vertical wells. The Company helps significantly improve their customers production **efficiency**—increasing output and decreasing water intrusion. With more than 5,000 installations to date—under a broad range of land and sea environments with no reported failures—**SWELLFIX**'s near failsafe **reliability** makes it the natural choice for zonal isolation.

History: The technology behind **SWELLFIX** began at Royal Dutch Shell Research in mid-2000, becoming a wholly owned venture company in January of 2006.

why swellfix?

Zonal Isolation: SWELLFIX provides a range of zonal isolation products and services, including cement protection and other cost-effective swellable elastomer applications for the oil and gas industry. The overall global zonal isolation market is estimated at nearly \$4 billion.

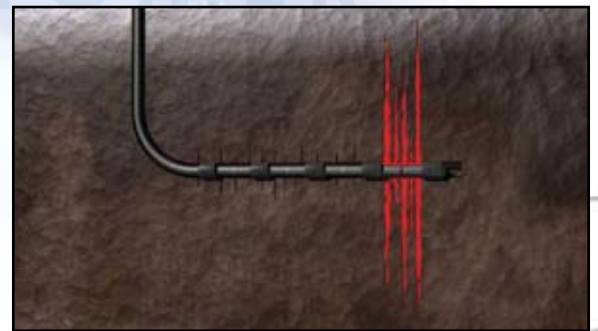

Swellable Elastomers: SWELLFIX's extensive product offerings include both water-and oil-activated swellable elastomers. When these elastomers come into contact with the appropriate liquid, they swell to seal the available space. The SWELLFIX solution is ideal for simple and effective zonal isolation or for situations where cement may fail in the well.
